EGI2024

September 30 - October 4

Funded by
the European Union

iMagine receives funding from the European Union's Horizon Europe research and innovation program under grant agreement No. 101058625

Competence Center:

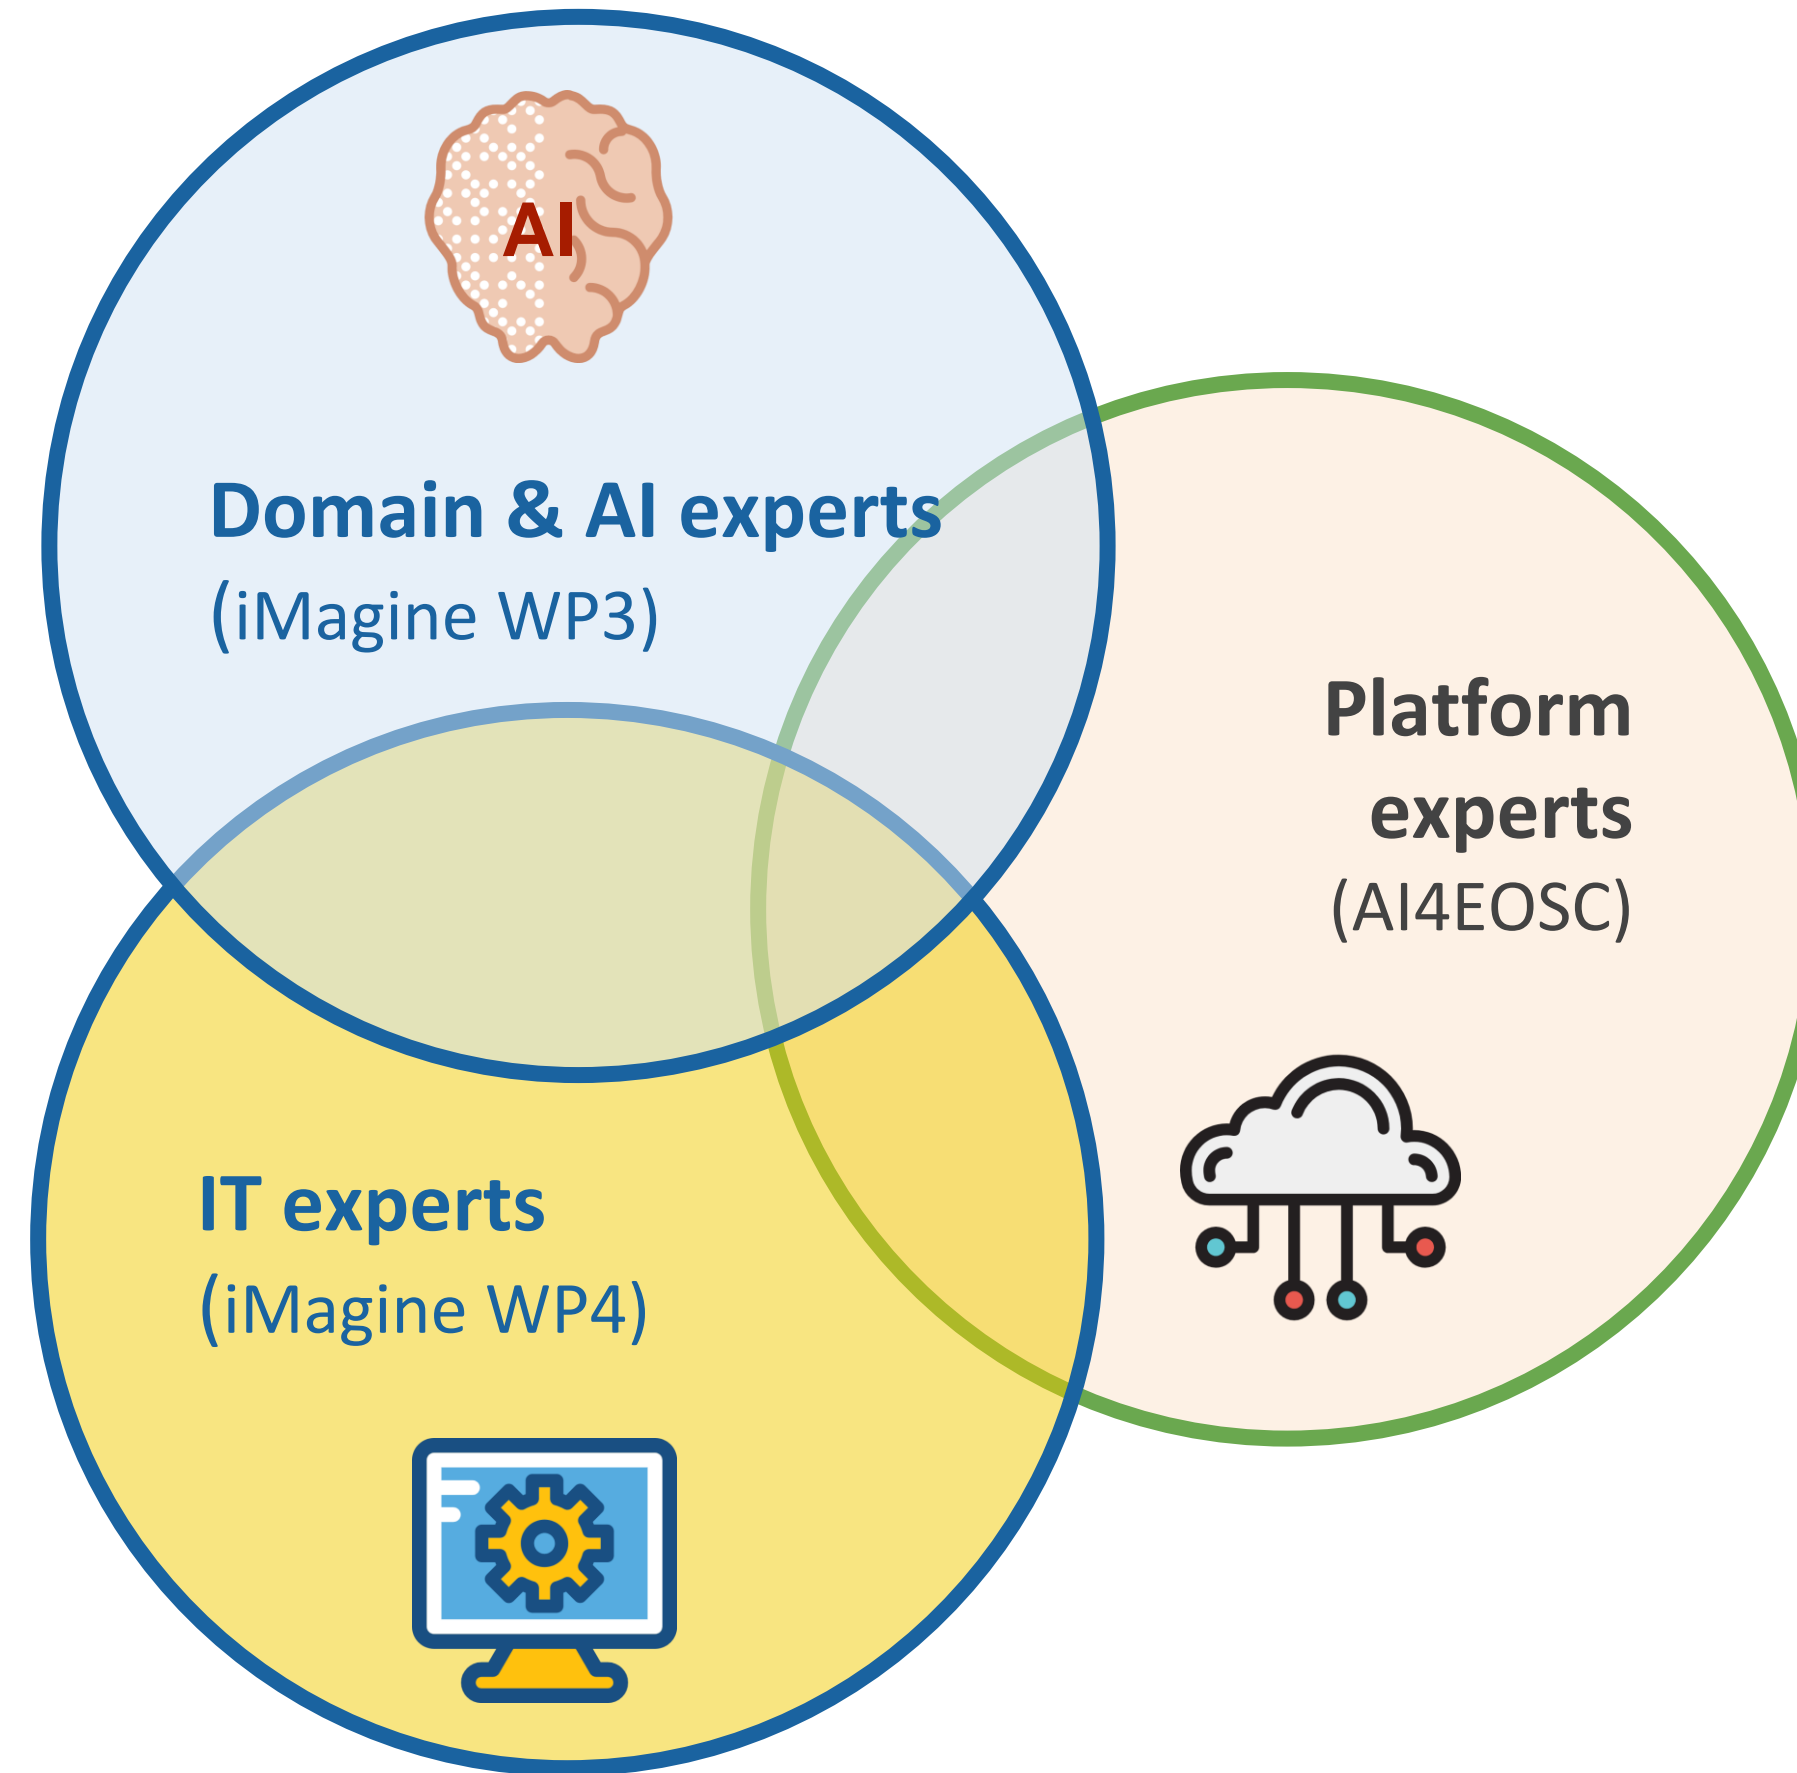

Introduction

- AI, IT and domain experts from the iImagine:
 - WP3: marine and freshwater application experts
 - WP4: AI framework / IT experts
- Monitoring and supporting of use cases through:
 - Regular meetings
 - Annual competence workshops
- Provide input for a “Best Practices” document
- Support in standardization and improving quality of datasets

Competence Center:

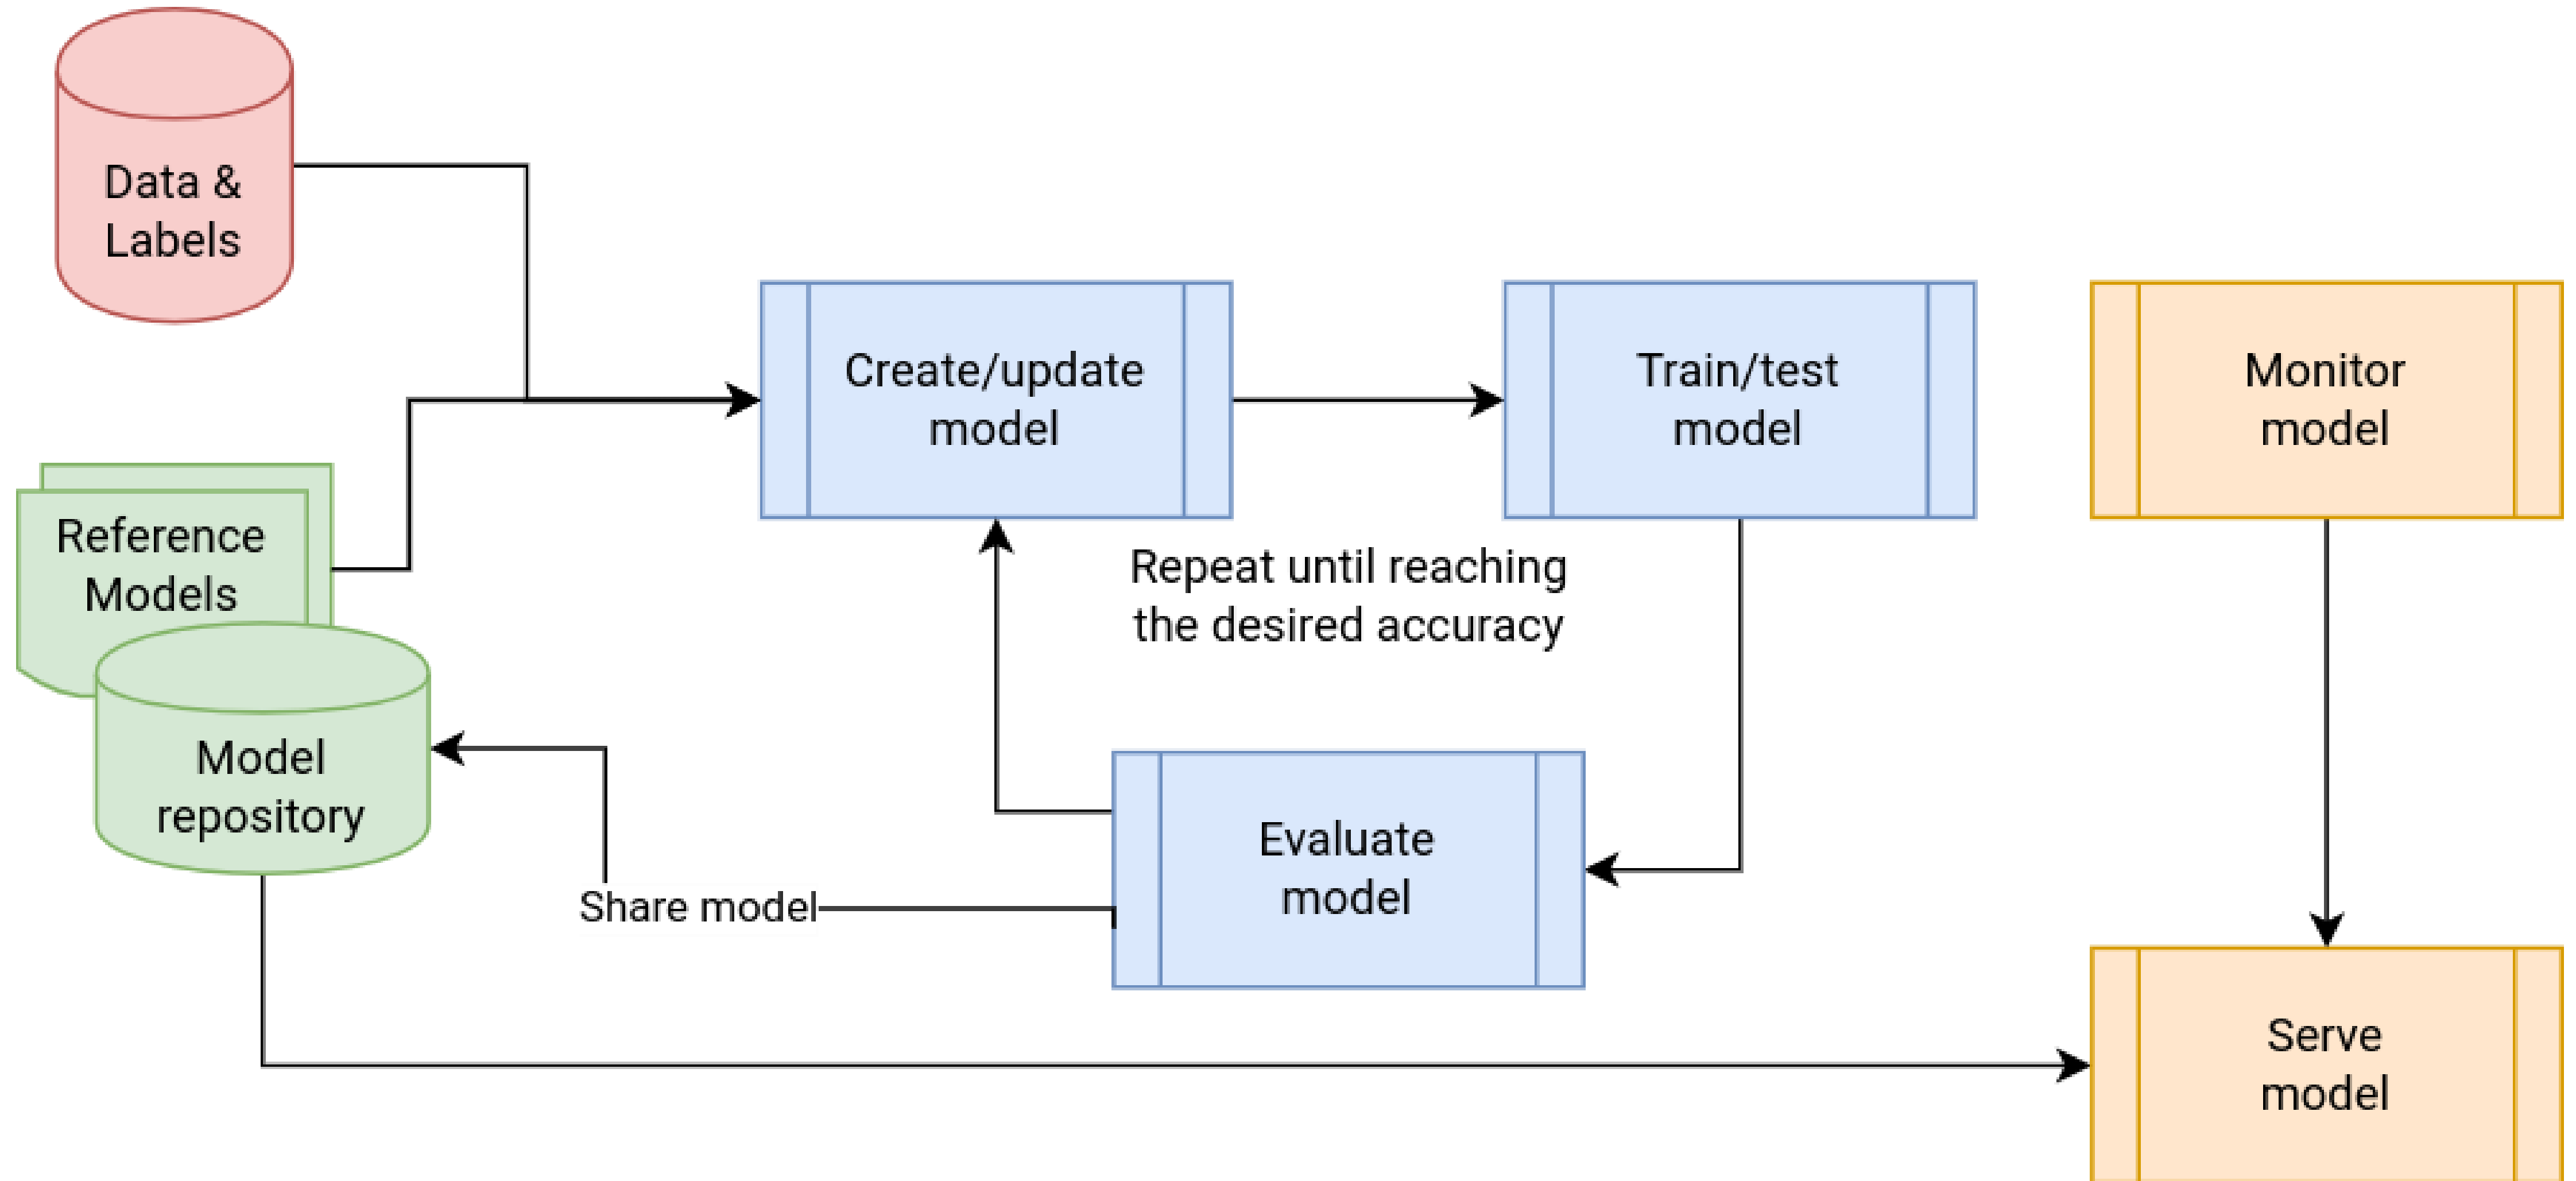

Synergies

AI4 |  eosC

Competence Center:

Support Whole AI/ML Development Cycle

Competence Center:

Achieved Best Practices

Deep Learning

Annotation Tools

Data Repositories and Open-source Dataset for Marine Applications

Preprocessing Techniques

Performance Metrics and Evaluation Methods

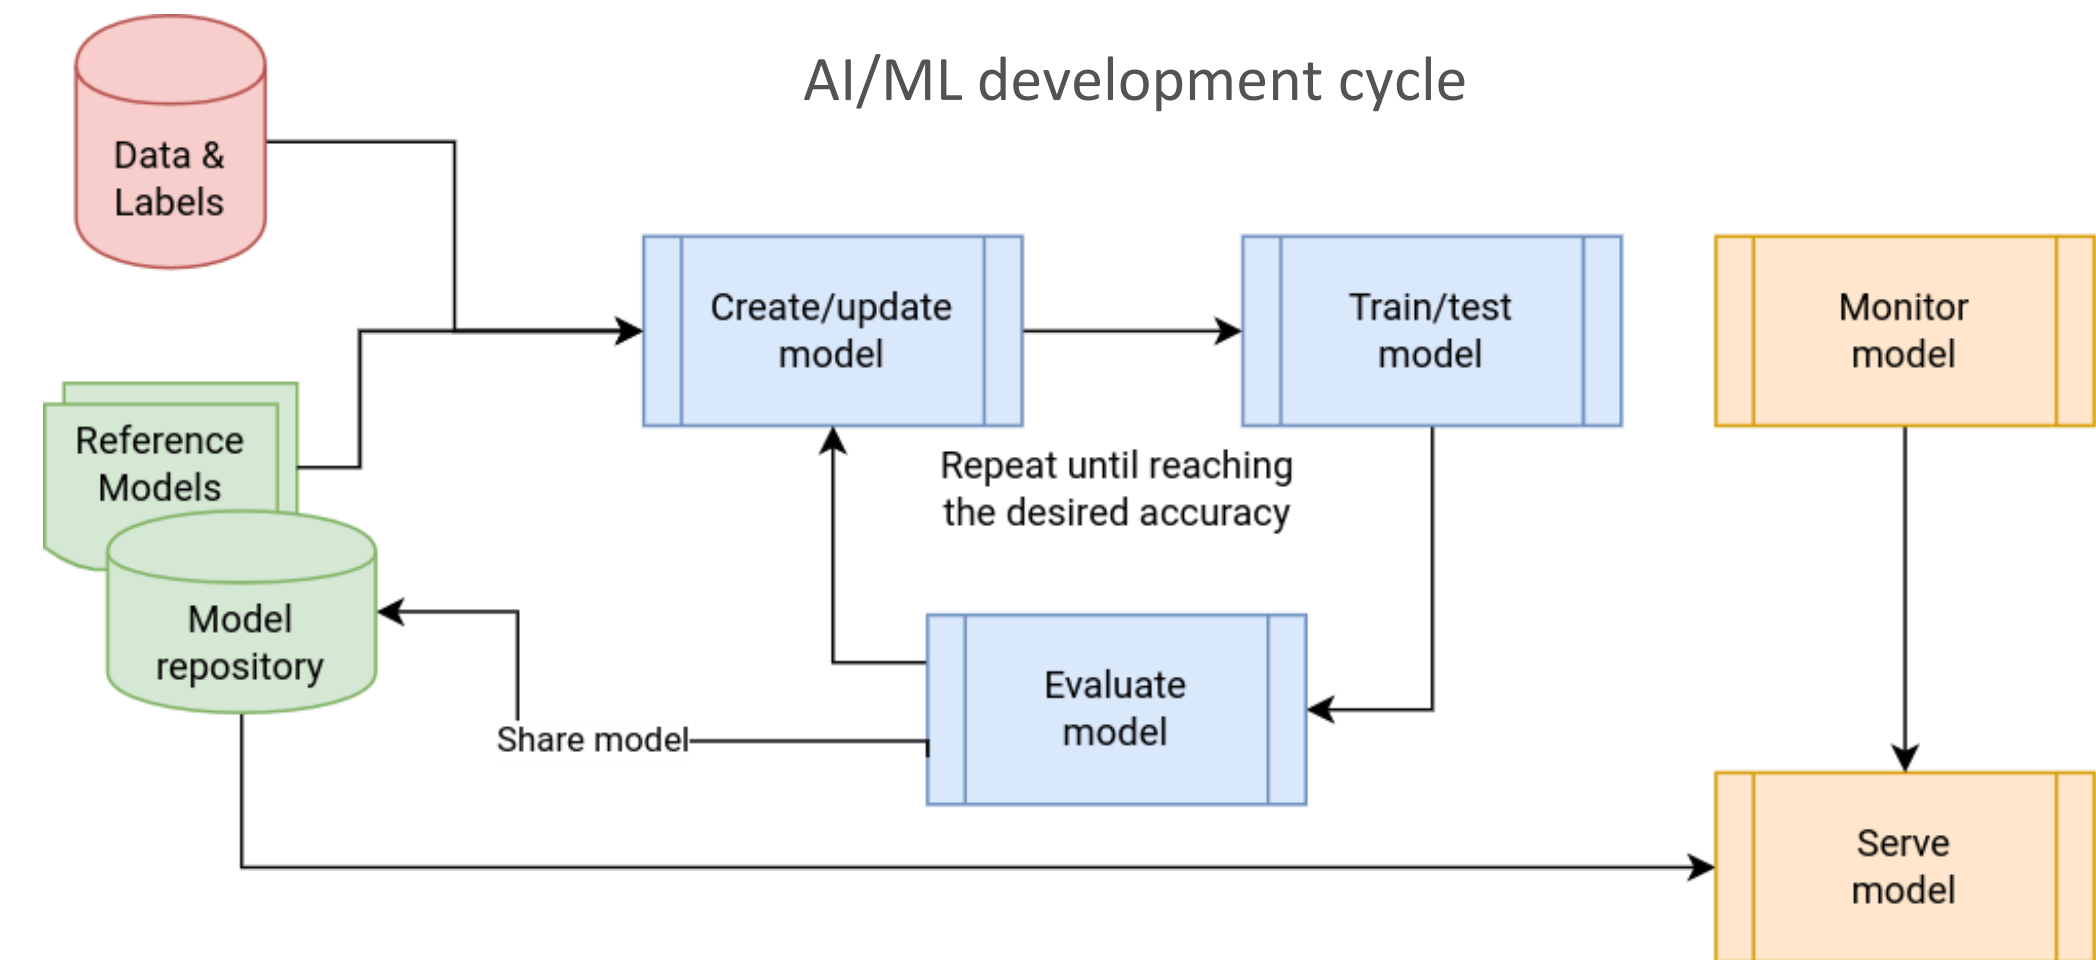

Tools for Monitoring Model Performance

Data Biases and Fairness in Aquatic Science Models and Data

Model Delivery

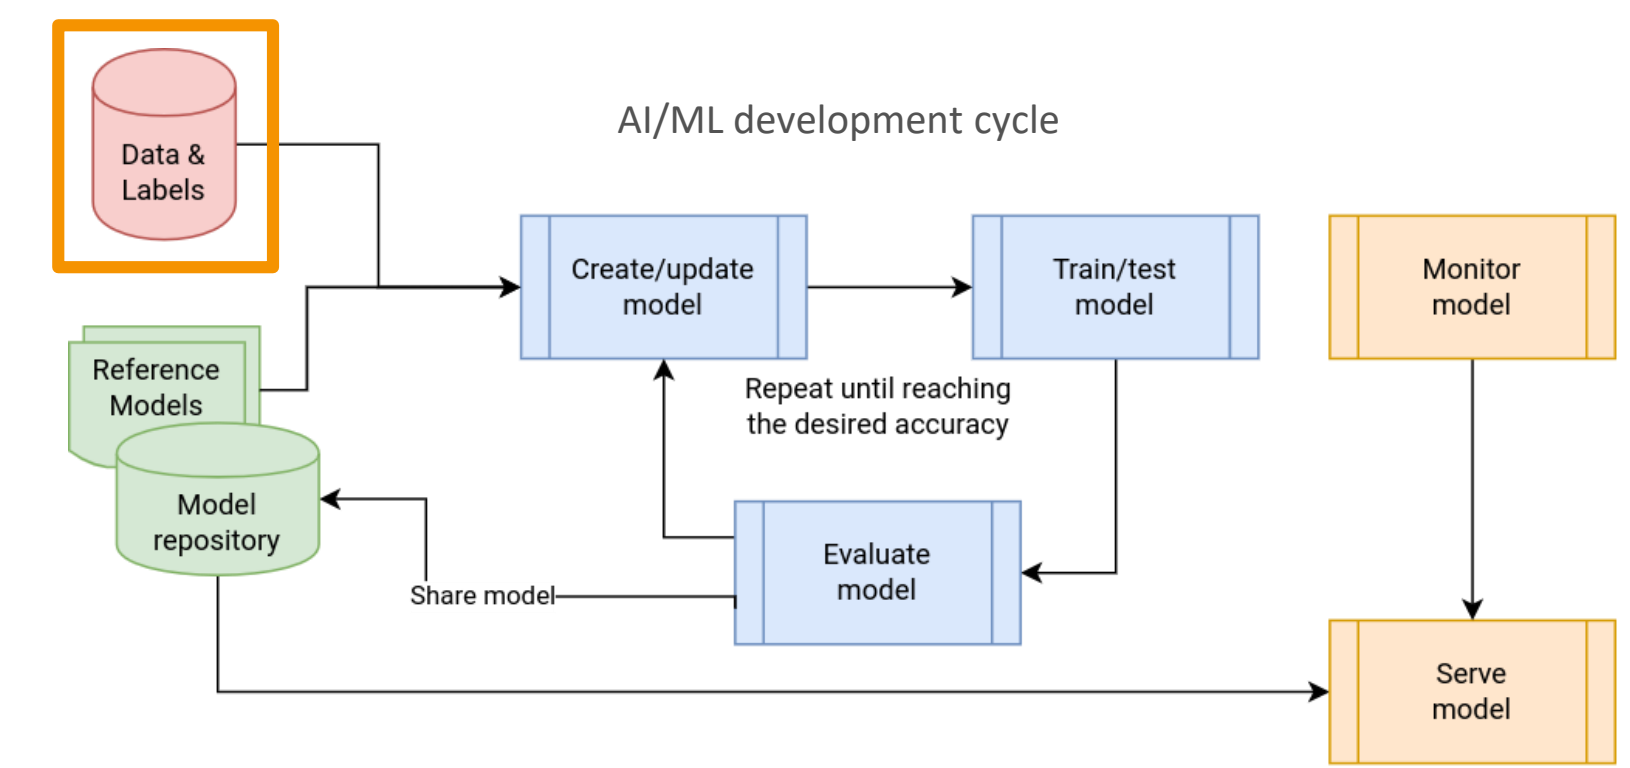

AI Model Drift Tools

Use Case Experiences

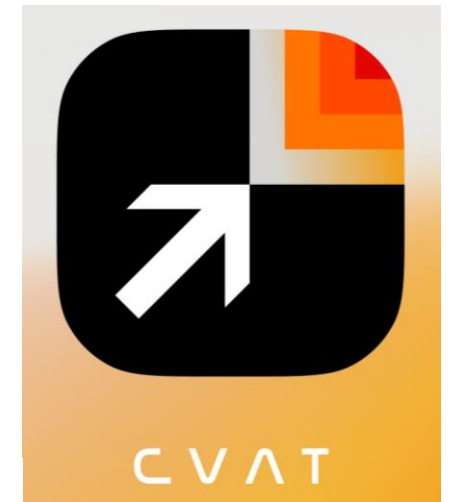

Best Practices:

Data and Labels

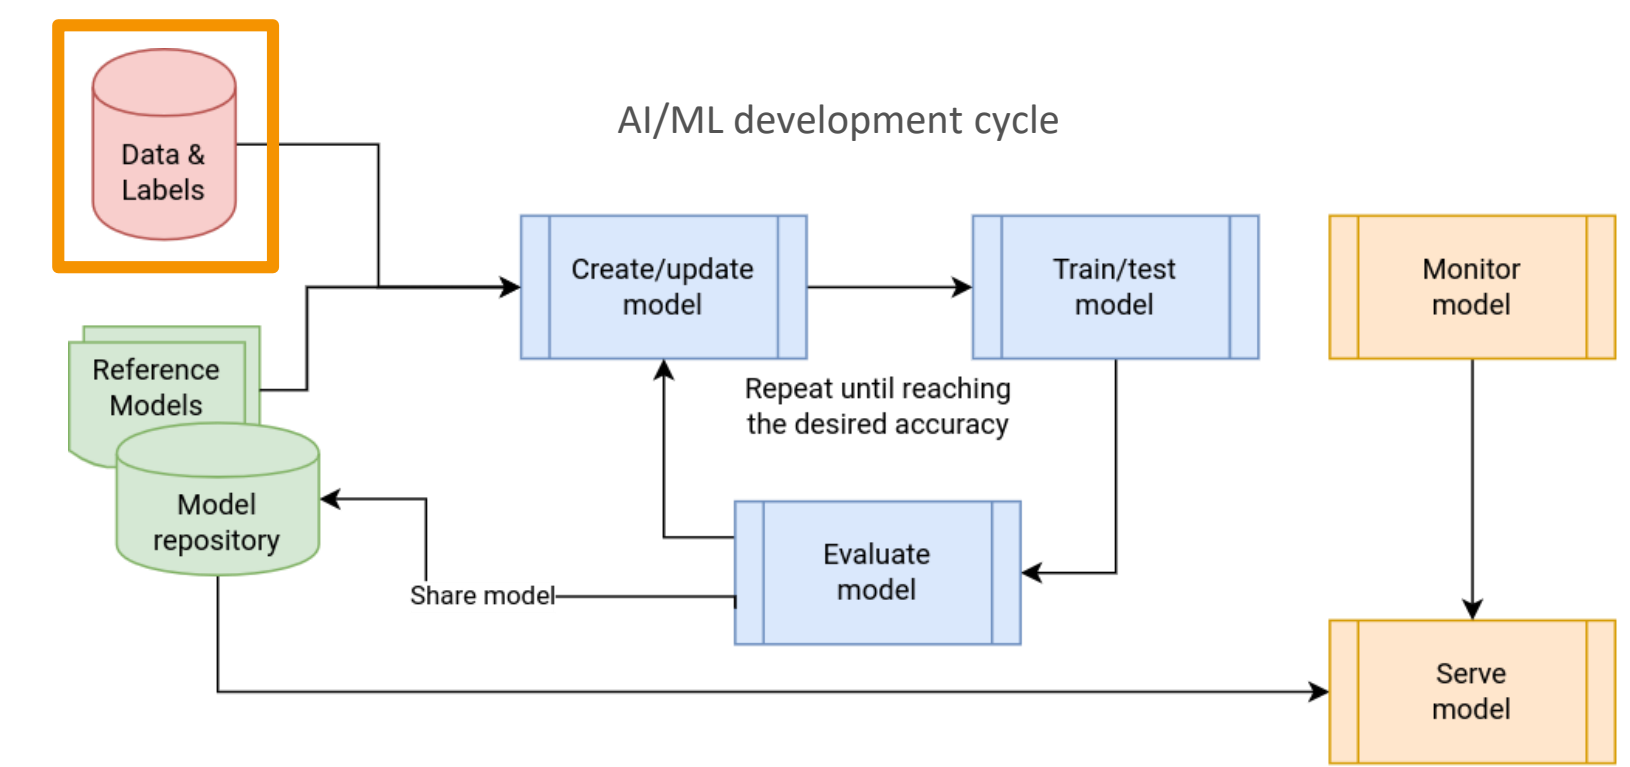

- Annotation Tools

- CVAT: user-friendly interface, robust annotation features, and flexibility
- Label Studio: more complex to use and install locally
- BIIGLE: web-based for marine image annotation
- RoboFlow: cloud-based platform with data augmentation
- LabelBox: customizable for different data types

Best Practices:

Data and Labels

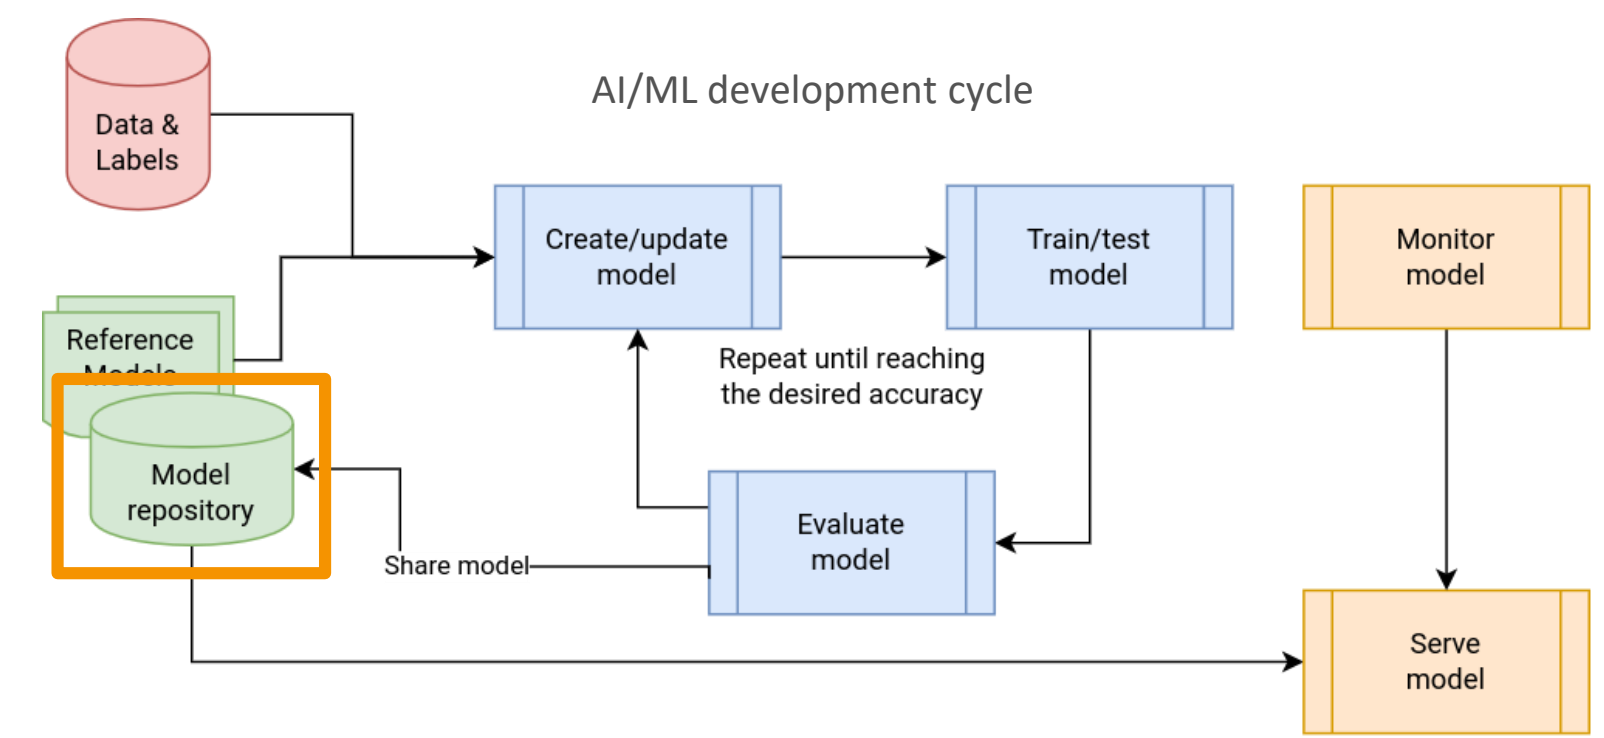

- Preprocessing Techniques

- Data Cleaning: removing errors and inconsistencies
- Normalization & Standardization: scaling pixel values to same scale
- Handling Imbalanced Data: oversampling/undersampling and class weight adjustment
- Data Augmentation: transformations such as flipping and rotating

Best Practices:

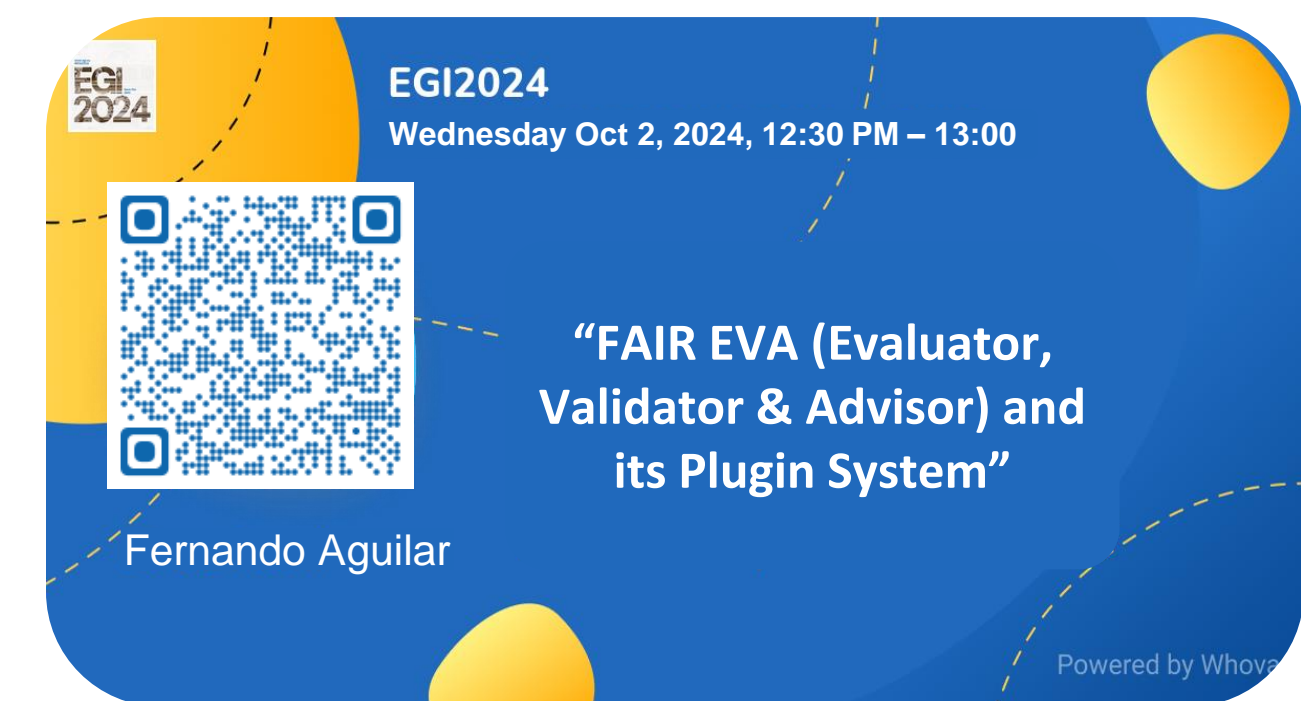

Data Repository

- Data Repositories and Open-source Dataset for Marine Applications
 - Zenodo: robust solution, open-access platform to share, store, and manage datasets
- Data Biases and Fairness in Aquatic Science Models and Data
 - FAIR EVA tool: improve the FAIRness of published training datasets concerning the metadata used in Zenodo

Best Practices:

Create/Update/Train/Test Model

- Deep Learning Models

- Classification

- Mobilenet

- Object Detection

- YOLOv8: most commonly used for object detection, showed strong performance

- Segmentation

- YOLOv8

- Mask2Former: achieved better performance in panoptic segmentation than instance segmentation with Mask R-CNN

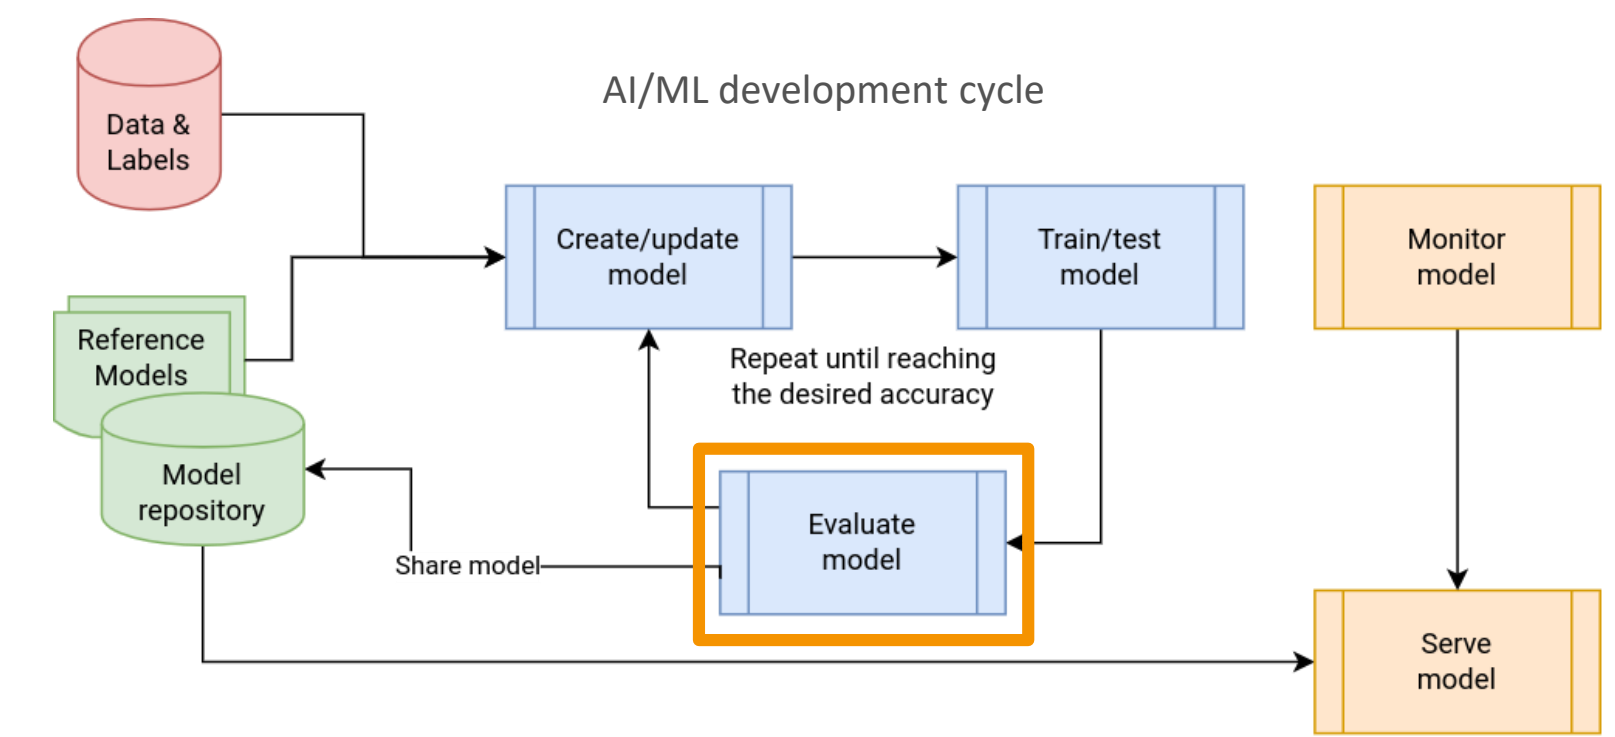

- Training and Testing on iImagine Marketplace

[Marketplace](#)

Best Practices:

Evaluate Model

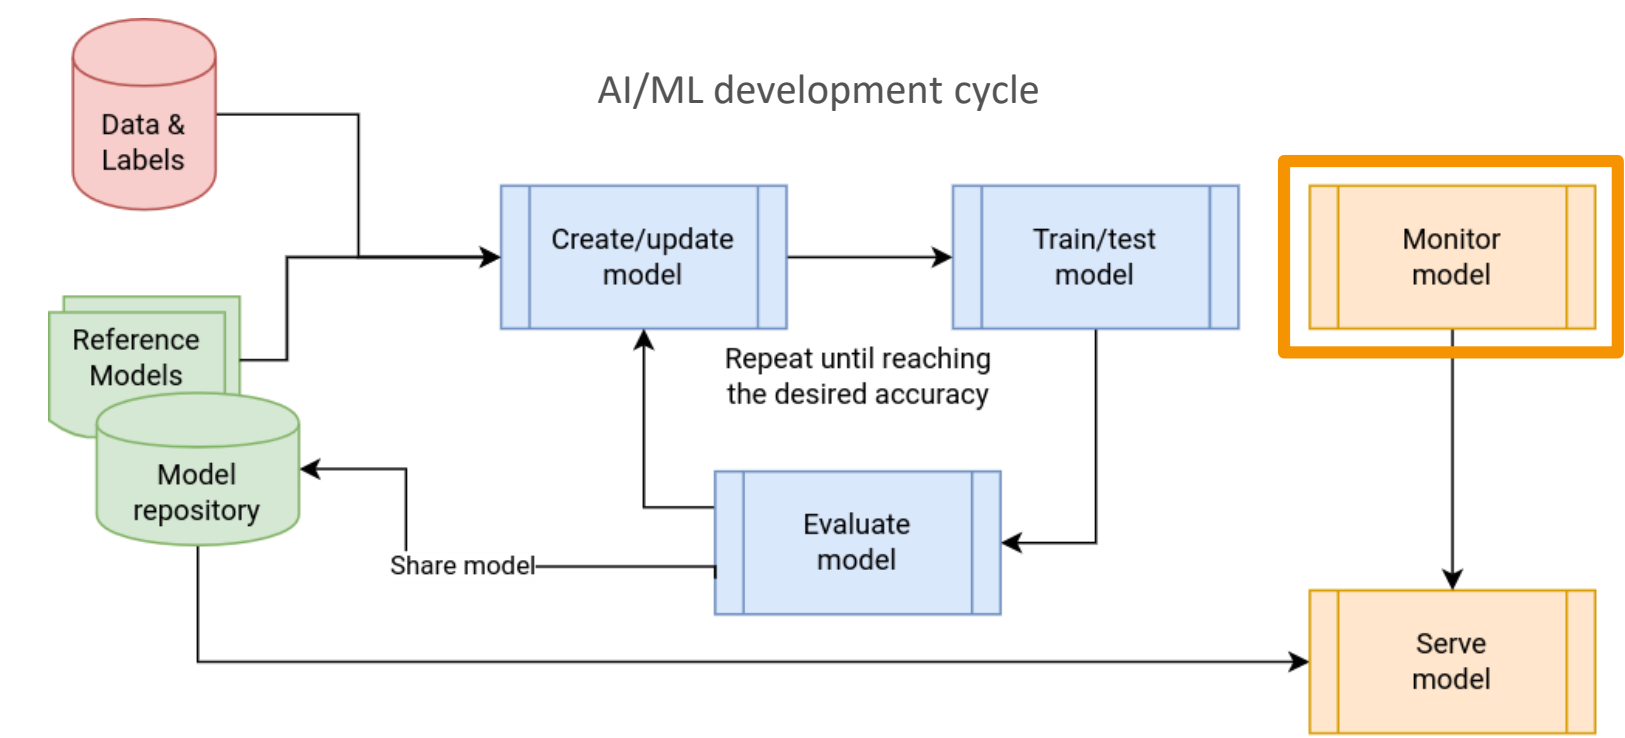

- Performance Metrics and Evaluation Methods

- Accuracy: correct predictions over total predictions
- Precision: the ratio of correctly predicted positive observations to the total predicted positives
- Recall: the ratio of correctly predicted positive observations to all observations in the actual class
- F1 score: the harmonic mean of precision and recall, useful for imbalanced dataset
- Intersection over Union (IoU): the overlap between two boxes, with greater overlap indicating a higher IoU

Best Practices:

Monitoring Model Performance

- Experiment Tracking Tools

- Mlflow: efficient management and tracking of machine learning experiments
- Tensorboard: less functionalites, single user and self-hosted
- Weights and Biases: self-hosted server is by default is not appropriate for production environment

Best Practices:

Serve Model

- Sharing and Serving AI Models via iImagine Marketplace
 - AI models are published as Docker images on the iImagine marketplace
 - Anyone authenticated can “Try” an inference endpoint (for 10 min)
- Model Deployment in Production
 - OSCAR: efficient and scalable deployment for running the AI model inferences

iImagine D3.4 Best practices for producers and providers of image sets and image analysis applications in aquatic sciences

Alibabaei, Khadijeh¹; Azmi, Elnaz¹; Kozlov, Valentin¹

Show affiliations

iImagine is a European project to serve aquatic researchers with a suite of high-performance image analysis tools equipped with artificial intelligence. To effectively achieve the objectives of the project, eight use cases in different areas of aquatic science are collaborating with the providers of the iImagine AI platform. This collaboration has yielded valuable insights and practical knowledge.

In this deliverable, we delve into the details of the best AI-based solutions for image processing in aquatic science, drawing on the extensive experience and knowledge we have gained over the course of the iImagine project. We thoroughly review the methods and tools used in the initial phase of data labelling, in the subsequent phases of model training and in the final deployment of the model as a service.
