Finalising PROC25: UMD software release procedure

[Link](#)

- Procedure re-introduced to describe how we control the middleware installed by the Resource Centres
 - We don't have direct control on when a RC upgrade their machines
 - They don't have to create change request tickets to update the middleware to a new version, differently from what was established for the EGI Core Services
 - But we do control the middleware that a RC can install
 - Also by providing a middleware baseline version

In particular:

- UMD team creates a change request ticket when a new UMD update is ready to be released
- The new update can be released after the approval of the EGI SDIS team

We haven't received particular feedback so far. We are going to finalise the procedure.

Thank you
