DASISH: research infrastructure for the Social Sciences and Humanities - Talk by Daan Broeder

Thursday, 29 March 2012 09:45 (45 minutes)

DASISH has recently started as a Humanities ESFRI cluster project. It is aimed at finding common requirements between the different ESFRI Social Science & Humanities projects, including CESSDA, CLARIN DARIAH, ESS and SHARE. The project also offers a good opportunity to see what services from the national and European e-infrastructures could be integrated in the Humanities research infrastructures and also identify gaps in the current offering.

Daan Broeder, for many years senior developer for archive and infrastructure solutions and now deputy director of TLA unit of the MPI for Psycholinguistics, is a technologist (electronics and IT) and has a long record in leading development tasks in international projects. Currently he is a member of the executive board of the Dutch CLARIN project and participates in several EU projects concerned with research infrastructure development, such as DASISH and EUDAT. In addition he is the convener of new ISO standards in the linguistic domain (TC37/SC4: Component Metadata Infrastructure 'CMD' and persistent identification 'PISA').
