```
COD F2F
=======

Testing new services
--------------------
Two issues:
1) get rid of ROD chasing,
2) not interfere with production infrastrucuture ad 1) set "Monitored" flag to
OFF on production services (to be checked) ad 2) not registering the service in
GOCDB (CE is ok), rest to check
Action: create a best practice for that

Long standing problems with probes
----------------------------------
Solution: mask an alarms with another alarm which is attached to some COD ticket,
COD ticket should be bound to some GGUS ticket to nagios probe

This month newsletter
---------------------
- EGI TF
- simplified procedure coming into a force
    - portal not ready, what we can do with simple tricks
