

# RC Forum: Feedback from PIC

Main theme: maximise the number of different communities using the resources in our RCs and their efficiency.

- Short presentations to share information on which communities we work with, special requirements, how we work with them, issues ...
- Many of the issues already covered in other forums:
  - Cloud: EGI Federated Cloud TF, StratusLab, Venus-C ...
  - Sustainability: EGI, e-FISCAL ...
  - Large scale Storage and Computing services: EGI, WLCG TEGs
  - ...
- May be these meetings can be useful to "glue" all this information together and help generating a more coherent picture from the RC point of view.

Acquisition of resources: group negotiation of s/w licenses was mentioned in the mail discussion. Could we think of group negotiation of hardware acquisition?
