

SCI-BUS/WS-PGRADE

Peter Kacsuk (MTA STZAKI), Zoltan Farkas (MTA STZAKI)

Abstract

Printable summary: WS-PGRADE/gUSE is capable of making use of cloud resources for almost 2 years now, first through the CloudBroker platform, and recently by using their EC2 interfaces directly. However, these solutions enable the exploitation of cloud resources, they lack the possibility to use a federated cloud infrastructures, like the EGI FedCloud. Thus, work has recently been started to add the possibility to use EGI FedCloud resources through their rOCCI interface.

Description of content: In the demonstration we will show how to access EGI FedCloud resources simultaneously using their EC2 and rOCCI interfaces. The demonstration will show, that an existing workflow in WS-PGRADE can be reconfigured with a few clicks to run on the EGI FedCloud resources.
